Nguyễn Trung Hiếu

Fullstack developer intern

Dob: 24/11/2004
Gender: Male
Phone: 0987979943
Email: 22028289@vnu.edu.vn
Address: Cầu Giấy, Hà Nội
GitHub https://github.com/TrungHieu-alt

SUMMARY

Final-year Computer Science student with solid experience in backend and full-stack development. Have worked on projects involving web applications, databases, and system integration using Java, Python, Node.js, and MySQL. Interested in learning new technologies and contributing to real-world projects through teamwork and continuous improvement

EDUCATION

2022 - 2026

University of Engineering and Technology, Vietnam National University, Hanoi (UET - VNU)

Major: Computer Science

Final-year undergraduate

SKILLS

Languages	Java, JavaScript (Node.js, Express), Python, C++
Tools	Git, Postman, Docker
Frontend	HTML, CSS, JavaScript, React.js, Next.js, JavaFX
Backend & APIs	FastAPI, Express.js, WebSocket, MQTT
Databases	MySQL, MongoDB, PostgreSQL
English	Capable of reading and understanding technical documents in English.

CERTIFICATIONS

2024	Back End Development and APIs Certificate (by FreeCodeCamp)
2023	SQL Intermediate Certificate (by HackerRank)

PROJECTS

8/2025 - 10/2025

Chat App (1 member)

Full stack Developer

- Developed a real-time chat platform designed for communication, enabling instant messaging, online status tracking, and secure data exchange.
- Built an end-to-end system from backend (Node.js, Express, MySQL, Socket.IO) to frontend (React, Vite, Tailwind, Shadcn UI).
- Designed a scalable MVC architecture with UUID-based schema, message rooms, and live socket channels, implemented JWT authentication, bcrypt hashing, and universal cookies for session control.
- Deployed on AWS EC2 with PM2, ensuring uptime and data security.

- Key features: real-time messaging, authentication, responsive UI, and role-based access.
- Tech stack: Node.js, Express, MySQL, Socket.IO, React, Vite, Tailwind, Shadcn UI, AWS EC2, Cloudflare
- GitHub: https://github.com/TrungHieu-alt/Chat-App
- Web: http://hieu-chatapp.duckdns.org

3/2025 - 6/2025

Airline Ticket Booking System (Course Project, 3 members)

Backend Developer

- Built a full-stack airline booking web app (Express, PostgreSQL, HTML/CSS/JS).
- Separated business logic into services (booking, flight management, payment simulation).
- Designed database schema (flights, users, tickets), implemented triggers for auto-updates.
- Developed user management features (role-based access: admin/user/guest).
- Implemented authentication (JWT, bcrypt) and secure login/registration.
- Wrote RESTful APIs with middleware validation.
- Contributed to frontend (search results, booking forms).
- Web: https://sunny-kringle-1afced.netlify.app/
- GitHub: https://github.com/TrungHieu-alt/Qairline-backend

9/2024 - 12/2024

Hand Rehabilitation Game (2 members)

Backend Developer

- Developed backend with FastAPI + WebSocket to stream gesture data from MediaPipe to game modules.
- Integrated Google MediaPipe module for real-time gesture recognition via webcam.
- Designed gesture-processing pipeline (noise filtering, angle/distance calculations).
- Built multi-level game logic (Arrow, Exercise, Grasp, Plane, Puzzle) with Node.js.
- Implemented real-time synchronization between backend and frontend, input validation, and error handling.
- GitHub: https://github.com/TrungHieu-alt/Hand-Rehabilitation

7/2024 - 11/2024

SmartLight (3 members)

Full Stack Developer

- Developed AI Module (Python, MediaPipe, OpenCV, Keras) for emotion recognition, integrated with IoT lighting system (MQTT, Mosquitto).
- Built Web Module (Node.js, Express, React, WebSocket) to control LED UI, display weather/system status.
- Integrated backend and frontend to synchronize AI emotion detection, user position, and environment data.
- Ensured smooth data flow across AI, backend and web UI.
- Responsible for all AI, web, and system integration tasks.
- GitHub AI Module: https://github.com/TrungHieu-alt/Ai-module.
- GitHub Web Module: https://github.com/TrungHieu-alt/project-web-module.

3/2024 - 6/2024

Library Management System (Course Project, 3 members)

Backend Developer

- Implemented Service layers for managing books, users, and borrow/return transactions.
- Built external book search API (SearchBookAPI) and integrated into the app.
- Managed DB connections with JDBC + MySQL, optimized CRUD operations and error handling.
- Developed authentication & authorization logic (Admin/Member).
- Integrated with JavaFX (dashboard & statistics).
- GitHub: https://github.com/TrungHieu-alt/OOP
